

T34 vs Tiger Maya Exporter Tutorial: Simple Export Process

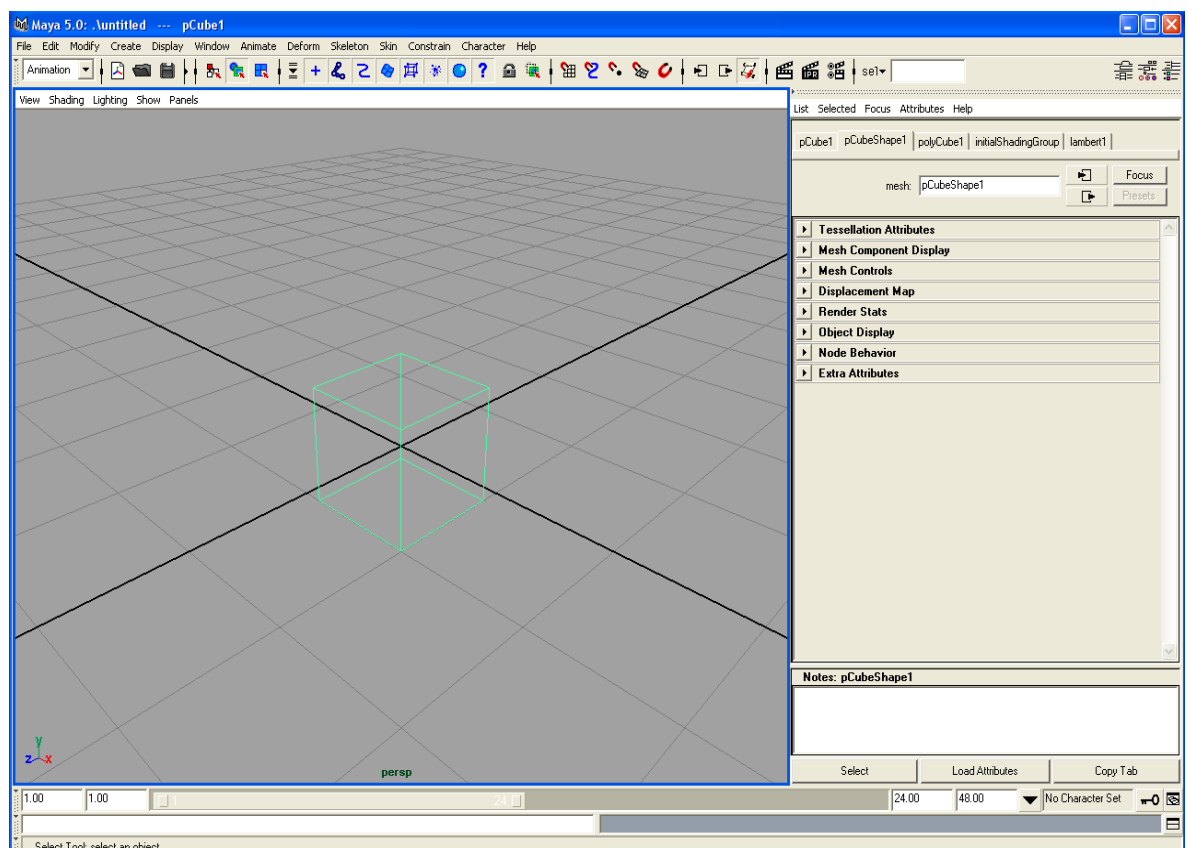

Initial Setup

- **Ensure D3DX9_28.DLL Presence:** Critical for resolving plugin loading issues. Part of DirectX 9.0c runtime components, this DLL is essential even if other DLLs are already in the Maya bin folder.
- **Copy Plugin and Tools:**
 - From the T34 vs Tiger game folder, copy `MayaExp.mll` to the Maya plugins folder (e.g., `C:\Program Files\AliasWavefront\Maya5.0\bin\plug-ins`).
 - Copy the contents of the tools folder from the TvT CD to `mydocuments\maya`.

Using Maya

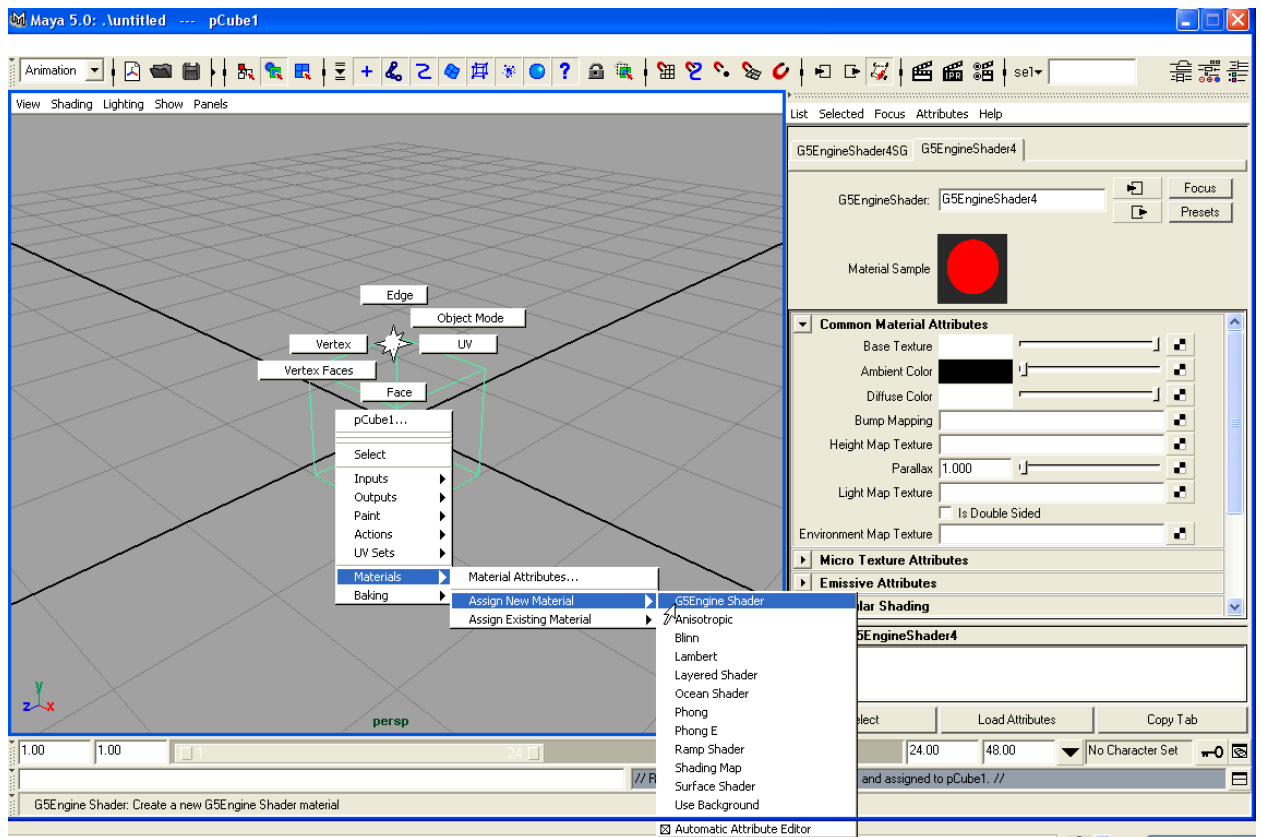

1. **Access Plug-in Manager:** In Maya 5, find it under `Window > Settings/Preferences`. Newer versions place it directly under `Windows > Settings/Preferences > Plug-in Manager`.

1. **Create a Model:** Open Maya 5.0 and create a simple primitive.

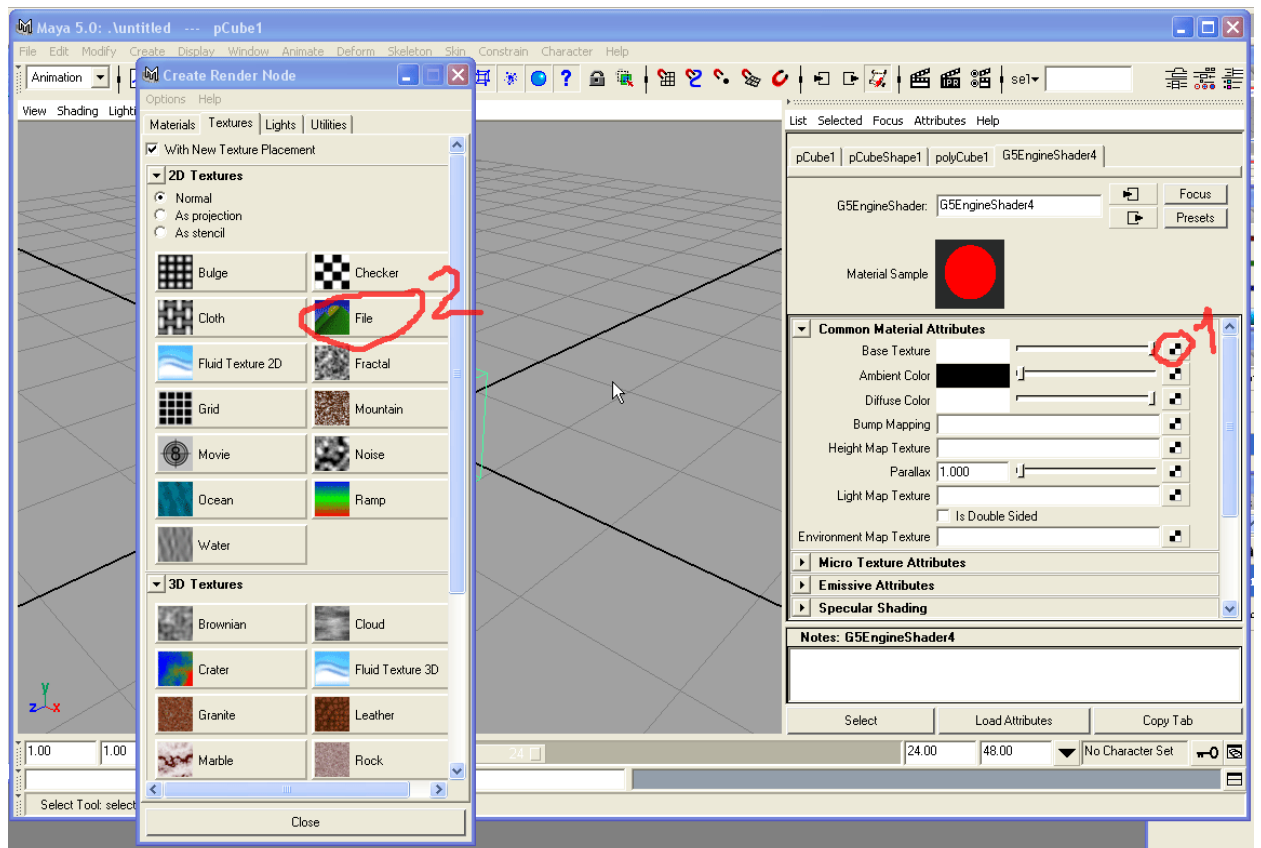

2. Material and Texture:

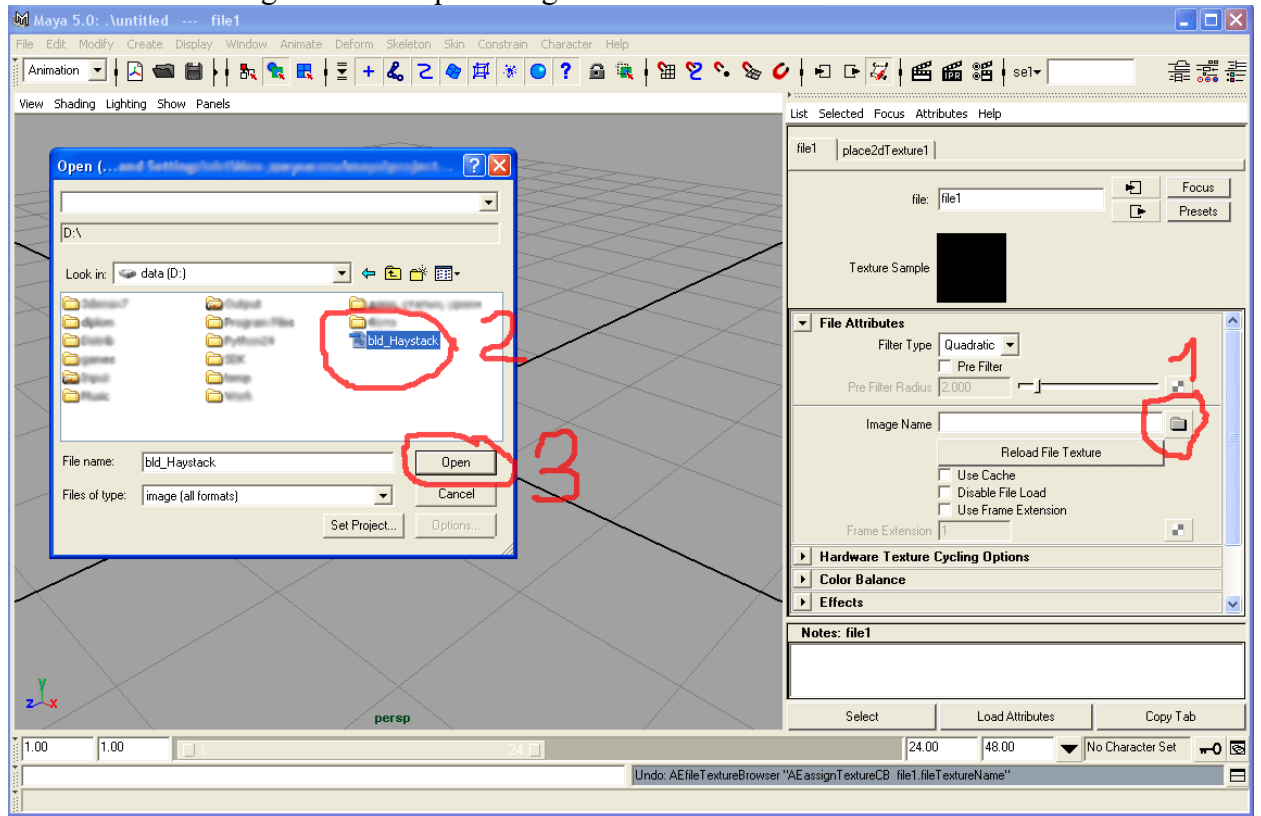

- Create a new G5 shader material.

Set up and select a texture for the material.

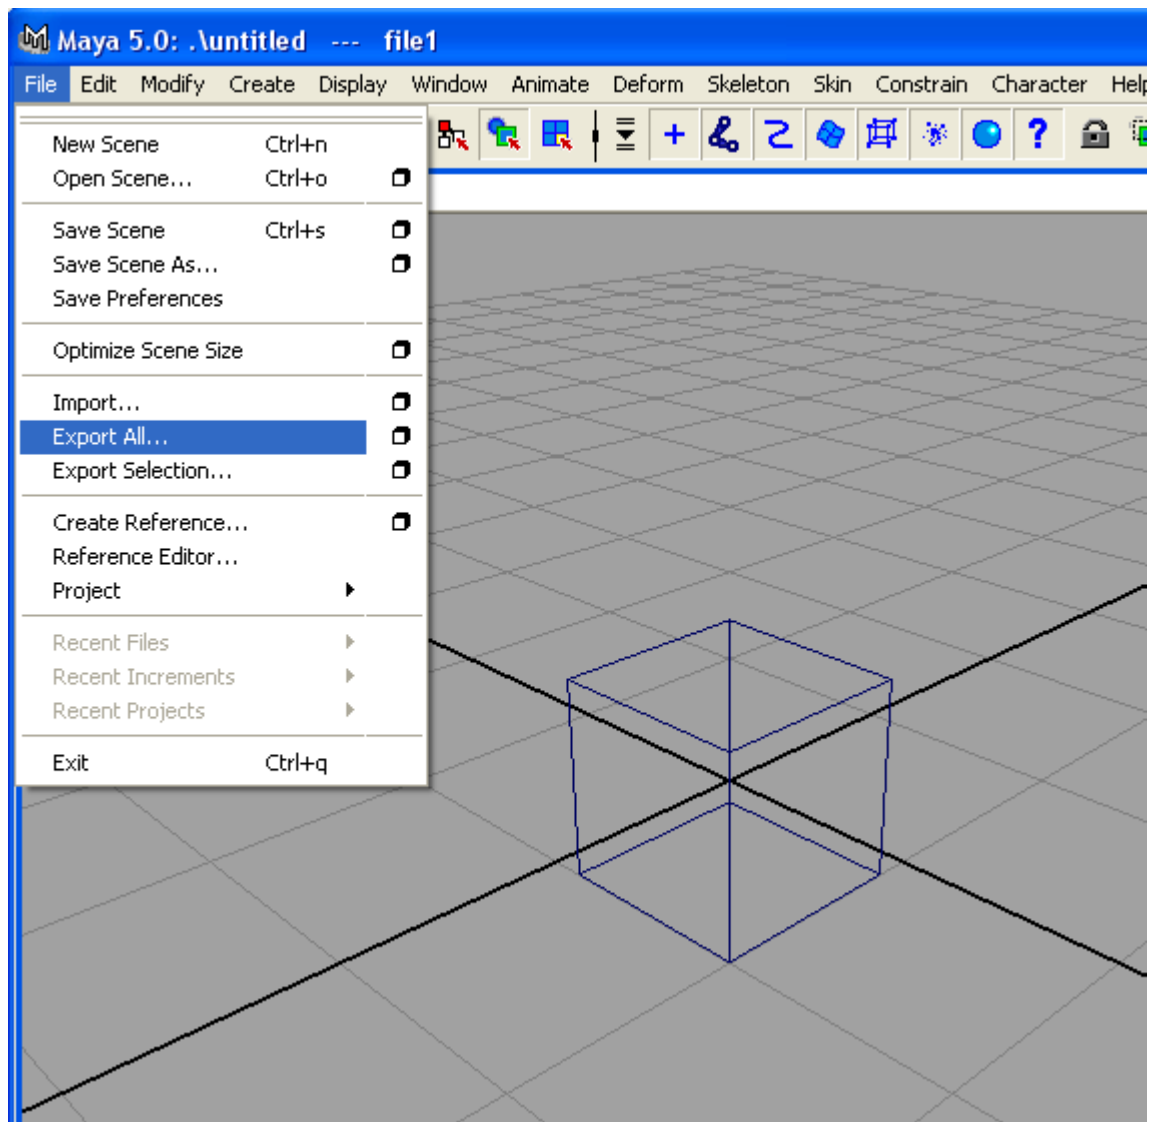

3. Texture selecting in the example is a tga!

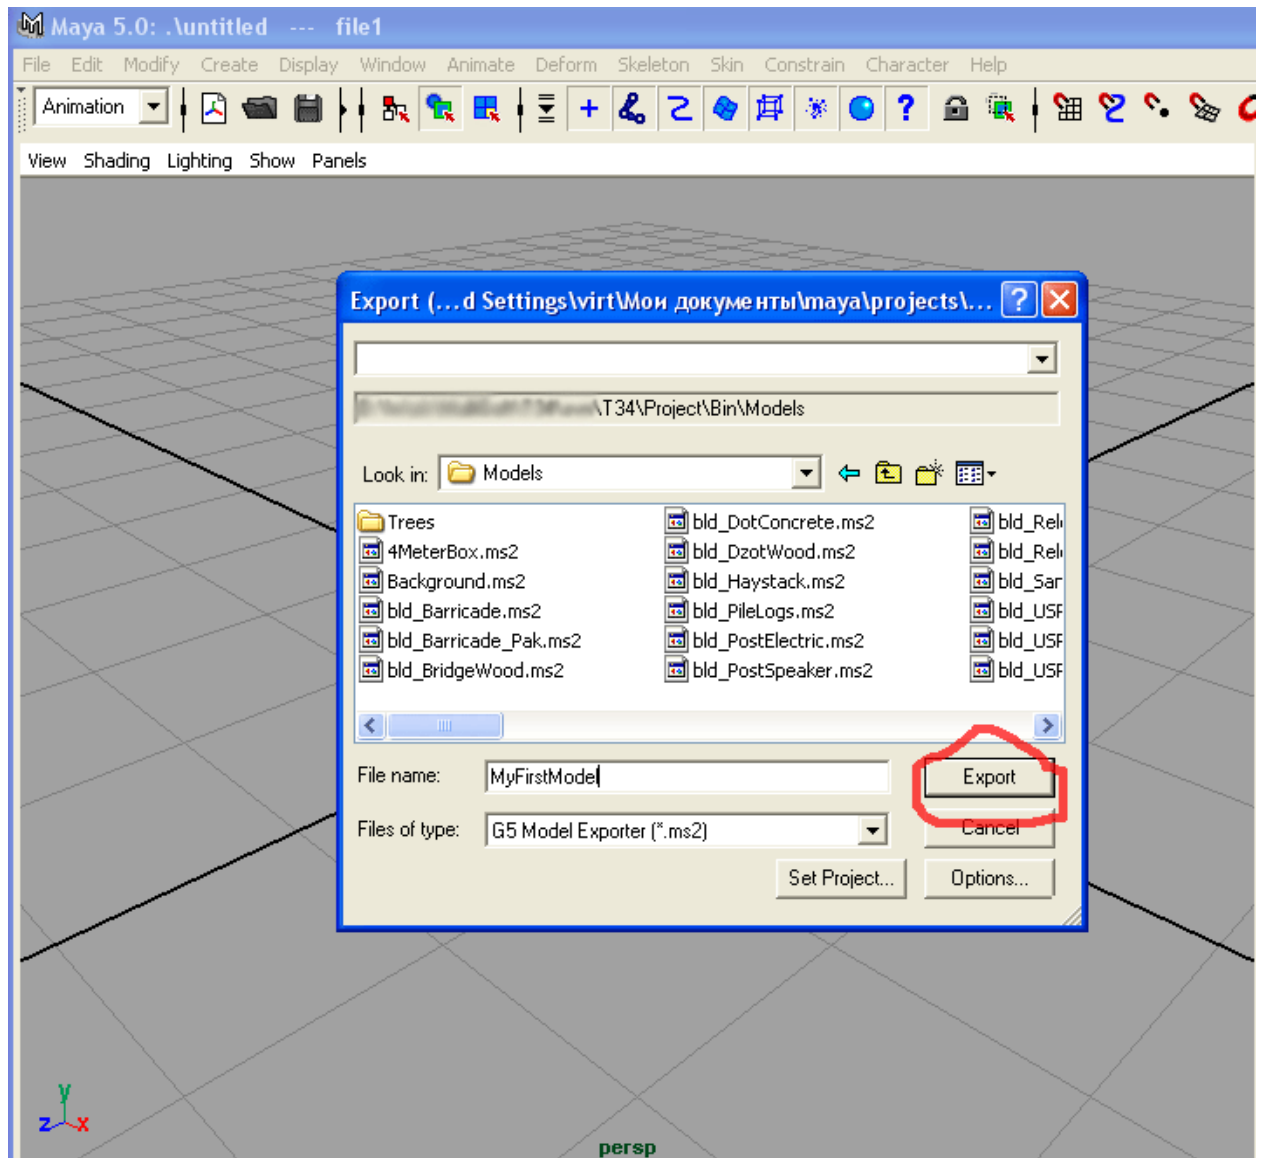

1. Export Process

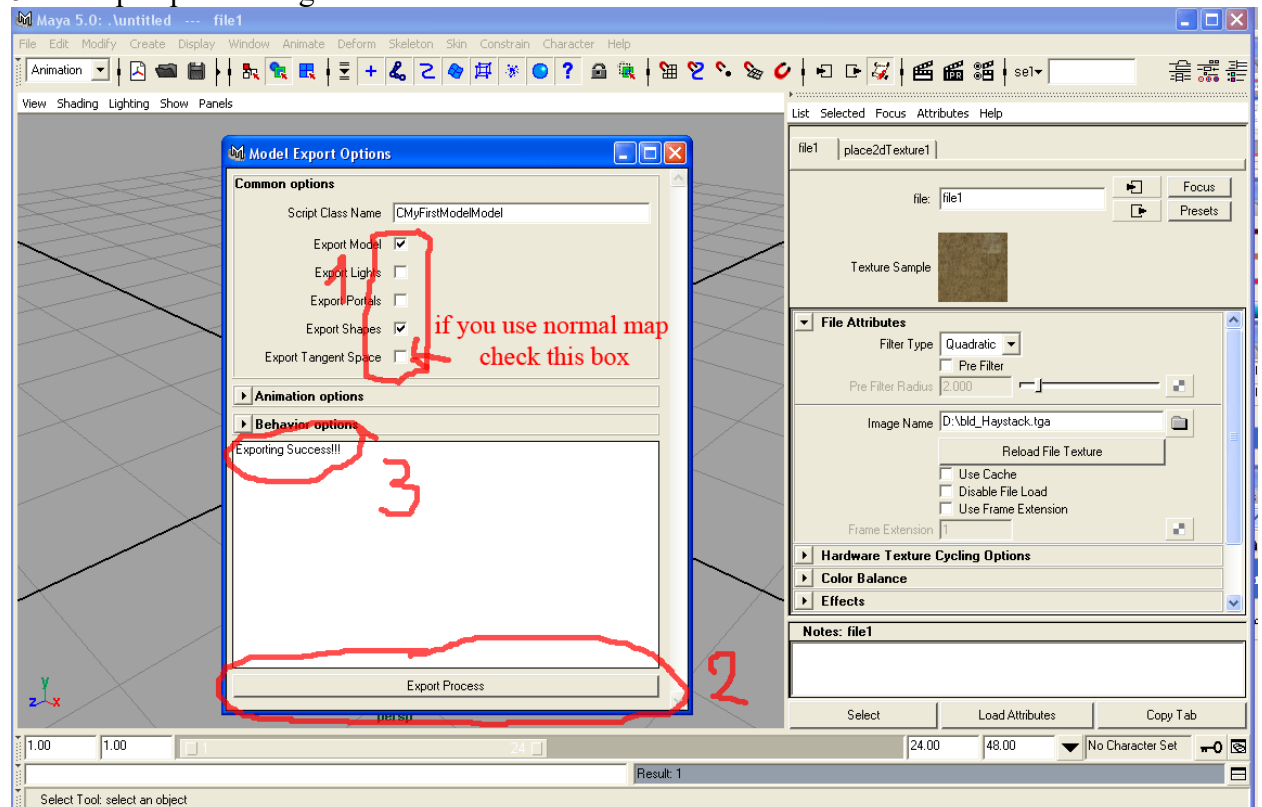

- Choose "Export All", configure export settings, and save the file.
- Change option in the dialog box to G5 Model Exporter
- Open the G5 editor to view your model in the asset list.

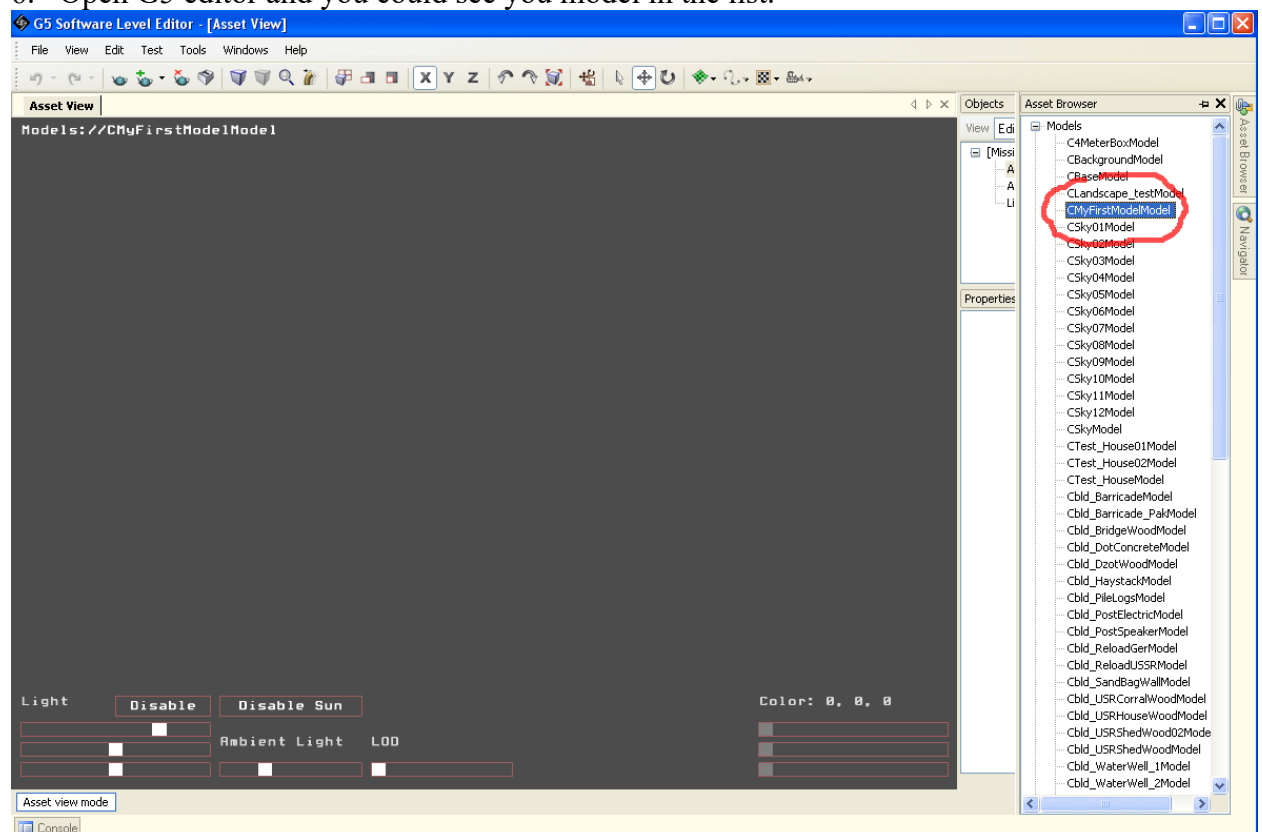

4. Save to file.

5. Setup export settings.

6. Open G5 editor and you could see you model in the list.

7. Zoom out.
